OVERVIEW

5TH WHEEL DUAL CAMERA

The 5th Wheel Dual Camera System provides drivers with views of the trailer and pin to assist in coupling.

Patent-pending technology opens robust glass-filled nylon doors when the vehicle is placed in reverse, giving two cameras a clear view of backing up.

The system makes it so much easier for drivers to make sure that everything is lined up properly — seeing the kingpin enter the throat of the 5th wheel helps ensure safety — and takes the guesswork out of the coupling process.

SYSTEM FEATURES

- Two camera system for a full view
- On-dash display for driver convenience
- Infrared technology for night vision
- Integrated heating system for uninterrupted cold weather operation
- Doors open automatically when truck is put into reverse
- Sturdy glass-filled nylon doors protect the cameras from rain, snow and debris
- Kit comes complete for easy installation
