

A new solution to an old problem

Haldex Reservoir Purge Valve (RPV)

The Haldex Reservoir Purge Valve (RPV) promotes a cleaner air system by reducing the chance of water, oil and other contaminants from entering air brake valves and systems by purging the reservoir every time the vehicle is placed into park.

\$ 80.31

Unique Function - Parking the vehicle activates the valve to purge the air reservoir down to 75-95 psi while ejecting any built-up moisture.

Maintains Pressure - The air system is charged and ready to release the brakes.

No Dependence - Valve function does not depend on compressor cycling time, pressure differential, electrical pulse or governor cut-in and cut-out settings.

Serviceable - The integrated filter can be serviced without removing the valve from the vehicle.

The Haldex Reservoir Purge Valve (RPV) must be used in conjunction with a manual drain valve as prescribed in FMVSS-121. The valve is small and light weight and the built-in mounting bracket creates multiple installation options.

Service Part No.	Part Description	SPECIAL PRICE
KN21200	Reservoir Purge Valve	\$ 80.31
48100200	Filter Service Kit	12.71
42123048	Installation Kit Includes Reservoir Purge Valve	158.78
K202016	Supplemental Bracket Kit	41.14
